

Consiglio Nazionale delle Ricerche

Conference on Crystallography, Structural Chemistry and Biosystems

From the development of methods in theory and computational modeling to crystallography, design, synthesis and characterization of bio/materials driving innovations in material science, pharmaceuticals, and biosensor technology.

Topics

- Innovative crystallographic methods and techniques.
- Structure-activity-function relationships of inorganic, organic, bioinorganic molecules of industrial and bio-pharmaceutical interest.
- Materials of technological interest as nano-crystals and quasi-crystals.
Development of new instruments and software.
- Sensors, biosensors and biodevices for
- environmental, agrifood and medical applications.
